

# Electromagnetism and Geometry

## 电磁与几何

(preliminary draft updated August 2023)

李思 (*Si Li*)

Tsinghua University

Thanks very much for your support of this book! It is greatly appreciated if you are willing to help improve it by sending your comments such as typo, mistake or suggestion at your tea time. You are welcome to submit your comment via either the website

<https://www.wjx.cn/vm/eTTr9H.aspx>

or the barcode below

You can also contact me at [sili@mail.tsinghua.edu.cn](mailto:sili@mail.tsinghua.edu.cn). The draft will be updated on my homepage: <https://sili-math.github.io/>. Thank you.

# Contents

<b>Preface</b>	<b>5</b>
<b>Chapter 1 Introduction: Maxwell's Equations</b>	<b>7</b>
1.1 Hodge Star . . . . .	8
1.2 Maxwell's Equations . . . . .	11
1.3 Conservation Law of Charge . . . . .	13
1.4 Coulomb's Law . . . . .	16
1.5 Ampère's Law . . . . .	18
1.6 Biot-Savart Law . . . . .	19
1.7 Gauss's Linking Formula . . . . .	21
1.8 Faraday's Law . . . . .	22
1.9 Ampère-Maxwell Law . . . . .	23
1.10 Potential and Gauge . . . . .	24
<b>Chapter 2 Static Electromagnetism</b>	<b>27</b>
2.1 Electric Field and Scalar Potential . . . . .	27
2.1.1 Poisson's and Laplace's equation . . . . .	27
2.1.2 Point Charge . . . . .	28
2.1.3 Uniform Ball . . . . .	29
2.1.4 Line Charges . . . . .	30
2.2 Interface Condition . . . . .	33
2.2.1 Infinite Plane Charge . . . . .	33
2.2.2 Spherical Shell . . . . .	36
2.2.3 Interface Condition . . . . .	37
2.2.4 Electric Conductor . . . . .	38
2.3 Boundary Value Problem . . . . .	39
2.3.1 Uniqueness . . . . .	40
2.3.2 Green's Function . . . . .	41
2.3.3 Method of Image . . . . .	43
2.4 Electric Dipole and Dielectric Polarisation . . . . .	45
2.4.1 Electric Multipole Expansion . . . . .	45
2.4.2 The Electric Dipole . . . . .	47

2.4.3	Dielectric Matter . . . . .	48
2.5	Magnetic Field and Vector Potential . . . . .	50
2.5.1	Magnetic Field . . . . .	51
2.5.2	Interface Condition . . . . .	55
2.6	Magnetic Moment and Magnetic Dipole . . . . .	56
2.6.1	Magnetic Moment . . . . .	56
2.6.2	Magnetic Dipole Layers . . . . .	60
2.7	Linking and Magnetic Helicity . . . . .	61
2.8	Dirac Monopole . . . . .	63
<b>Chapter 3 Electrodynamics</b>		<b>66</b>
3.1	Force and Energy . . . . .	66
3.1.1	Lorentz Force . . . . .	66
3.1.2	Electromagnetic Energy . . . . .	68
3.2	Electromagnetic Induction . . . . .	71
3.2.1	Electromotive Force and Flux Rule . . . . .	71
3.2.2	Mutual Inductance . . . . .	74
3.2.3	Self Inductance . . . . .	75
3.2.4	Magnetostatic Energy . . . . .	76
3.3	Electromagnetic Wave . . . . .	77
3.3.1	Wave Equation . . . . .	77
3.3.2	Plane Waves . . . . .	78
3.3.3	Polarization . . . . .	79
3.3.4	Wave Packets . . . . .	81
3.4	Green's Functions . . . . .	82
3.4.1	Wave Equation with Source . . . . .	82
3.4.2	Green's Function for the Wave Equation . . . . .	84
3.4.3	Retarded and Advanced Solutions . . . . .	85
3.5	Dipole Radiation . . . . .	87
3.5.1	Spherical Wave . . . . .	87
3.5.2	Electric Dipole Radiation . . . . .	88
3.6	Moving Point Charge . . . . .	92
3.7	Scattering . . . . .	97
<b>Chapter 4 <math>U(1)</math> Gauge Theory</b>		<b>100</b>
4.1	Fiber bundle . . . . .	100
4.1.1	Fiber Bundle . . . . .	100
4.1.2	Vector Bundle . . . . .	106
4.1.3	Principal Bundle . . . . .	109
4.2	$U(1)$ -connection and Parallel Transport . . . . .	111

4.2.1	Vertical Vector Field	112
4.2.2	Connection 1-form	113
4.2.3	Horizontal Vector	114
4.2.4	Parallel Transport	116
4.3	Curvature and Chern Class	118
4.3.1	Curvature 2-form	118
4.3.2	Holonomy and Curvature	120
4.3.3	Chern Class	121
4.4	Local Gauge and Transition	123
4.4.1	Local Gauge 1-form via Trivialization	123
4.4.2	Connection via Transition Functions	126
4.5	Gauge Transformation	129
4.5.1	Gauge Transformation	129
4.5.2	Local v.s. Global Gauge Transformations	132
4.6	Maxwell Theory as $U(1)$ -gauge Theory	134
4.6.1	Potential as Gauge 1-form	134
4.6.2	Electromagnetic Field as Curvature	134
4.6.3	Maxwell Action	135
4.6.4	Gauge Principle and Charge Conservation	136
4.6.5	Magnetic Monopole	136
4.7	Associated Bundle and Matter Field	138
4.7.1	Associated Vector Bundle	138
4.7.2	Hermitian Inner Product	139
4.7.3	Covariant Derivative	140
4.7.4	Matter Wave Function	141
<b>Chapter 5 Electromagnetism and Special Relativity</b>		<b>143</b>
5.1	Lorentz Transformation	143
5.1.1	Lorentz Group	143
5.1.2	Transformation of Tensor Fields	145
5.1.3	Invariance of Inner Contraction	148
5.2	Lorentz Invariance of Maxwell's Equations	148
5.2.1	Transformation of Electromagnetic Fields	148
5.2.2	Transformation of Charge-Current Density	150
5.2.3	Transformation of Maxwell's Equations	150
5.3	Relativistic Lorentz Force Law	153
5.3.1	Non-relativistic Charged Particle	153
5.3.2	Relativistic Charged Particle	153
<b>Bibliography</b>		<b>157</b>

# Preface

In April 2021, Qiuzhen College (求真书院) was newly established at Tsinghua University under the leadership of Professor Shing-Tung Yau. It homes the distinguished elite mathematics program in China starting in 2021: the “Yau Mathematical Sciences Leaders Program” (丘成桐数学科学领军人才培养计划). This program puts strong emphasis on basic sciences related to mathematics in a broad sense. Though majored in mathematics, students in this program are required to study fundamental theoretical physics such as classical mechanics, electromagnetism, quantum mechanics, and statistical mechanics, in order to understand global perspectives of theoretical sciences. It is an exciting challenge both for students and for instructors.

This preliminary note is written for the course “Electrodynamics” that I lectured at Qiuzhen College in the spring semester of 2023. The lecture note consists of two parts. The first part is to explain key physics ingredients of electromagnetism, such as Maxwell’s equations, electrostatics, magnetostatics, electromagnetic waves, radiation, scattering, etc. The second part is of geometric nature, which explains Maxwell theory as  $U(1)$ -gauge theory in terms of fiber bundle theory, as well as its consistency with special relativity. We emphasize on different faces of concrete examples in order to understand the bridge between physics and mathematics. This note is in succession to [10] in this series, and assumes basic knowledge on differential forms and vector fields. Readers can consult [10] for preliminary geometric backgrounds.

I greatly appreciate the “*Notes Taker Program*” at Qiuzhen College, which has triggered and supported the production of this note. A preliminary version of this note was carefully typed by Yang Peng (杨鹏) all the way along the course, and I am extremely grateful to his great job for *Notes Taker*. I would also like to thank Zhou Jiawei (周嘉伟)、Dingxu Zhihan (丁徐祉晗)、Liu Jiuhe (刘九和) and Quan Hanwen (权瀚文) for their help on proofreading of the first version of this note.

@ Jingzhai (静斋)

June, 2023

This is a drawing by my daughter expressing herself with her brother. I found it interesting as it illustrates precisely the essence of electromagnetism on the coupling of electric and magnetic fields as well as the topological nature of Maxwell's equations.
